# Simple Panel Arrangement

- in the ☐, the eye path is from ☐ to ☐ and then top to bottom

- no question of eye path in simple layout with larger box on left side

# Stacking Panels

- stacking panels on ☐ side creates ☐

- the readers don't know where their eyes go next, what panel to ☐ next

Overlapping Panels

- only use when ☐ or desired

- overlapping can help ☐ the eye or establish ☐

- an inelegant solution - avoid stacking panels on the left side of the page

Inset Panels

- panels placed ☐ or overlap a main panel

- used to add ☐, focus on ☐, cut to a parallel action, and/or alternate the point of view
